Lansing/Coca Cola Bottling Company

MID039124342

The Coca Cola Bottling Company at 3300 S. Creyts Road in Lansing, Michigan lost approximately 4,000 gallons of gasoline from an underground storage tank. Approximately 1,126 gallons were recovered. Four monitoring wells were installed and samples were taken on May 28, 1980. Analysis detected 2-12 ppb of gasoline constituents. On August 11, 1980 the four monitoring wells were sampled again and analysis revealed 4-8 ppb of gasoline constituents. Upon approval from the Michigan Department of Natural Resources, recovery operations were stopped because of the presence of a subsurface hard clay layer which is believed to prevent migration.

According to Pat Donovan of the Michigan Department of Natural Resources, Lansing District Site Assessment Unit, only gasoline was known to have been released at this site.

Therefore, this site is considered to be a fuel oil/petroleum products site that should not be evaluated under CERCLA provisions. It is recommended that no further action be taken by the Field Investigation Team (FIT).
